PROJECTS

CRUD Project With JavaScript Vanilla ⬈

This project demonstrates the implementation of CRUD operations (Create, Read, Update, Delete) using JavaScript and Pug, a template engine for Node.js. The application allows users to manage a collection of products, where each product has various attributes such as title, price, taxes, ads, discount, count, and category

AL-TAYSEER MEDICAL CENTER IN NASR CITY ⬈

The medical clinic's website offers an advanced platform for easy and efficient appointmentscheduling. With its user-friendly interface and modern technologies, the website provides a uniqueexperience for patients. Users can effortlessly book appointments, access details of their reservations,and streamline time management. This enhances communication with the medical team, contributingto a seamless healthcare experience

MAFHOOM PLATFORM EDUCATION ⬈

The ultimate online learning platform caters to the needs of teachers, students, and parents, empowering educators to seamlessly upload their lectures in diverse formats, including video, audio, text, or slides. This versatile platform ensures that students have unrestricted access to these lectures, enabling them to learn at their own pace, anytime and anywhere.

CHAT GPT CLONE ⬈

The This project aims to create a ChatGPT clone using HTML, CSS, JavaScript, and an API. ChatGPT is a large language model developed by OpenAI. It is capable of generating text, translating languages, writing different kinds of creative content, and answering your questions in an informative way.

WEATHER APP USING VANILLA JS AND API FORECAST ⬈

I developed a real-time weather application using Vanilla JavaScript, integrating an external API to retrieve weather forecasts. While the primary focus was on enhancing UI/UX and handling live data, the project's source code is available on GitHub. Uploading the project to a domain posed challenges due to the API relying on the HTTP protocol.
